

## RNS Announcement

23 August 2023

AIM: SYN

### Cambay C-77H Workover Update

---

Synergia Energy Ltd (the "Company" or "Synergia") provides the following update concerning the Cambay C-77H well workover.

Following the removal of the bridge plug that isolated the original 4 perforated and fracked zones from 2014, the production tubing was re-inserted into the well and the well placed on production to establish a production baseline without artificial lift. The well has stabilised at a gas production level of c. 130,000 – 150,000 SCFD. The well continues to exhibit severe liquid loading.

The planned installation of a jet pump artificial lift system and ancillary surface equipment is underway with civil works preceding the hook up of the surface pump and separator. Due to availability constraints, the workover rig will arrive on location on September 8<sup>th</sup> to remove the production tubing and re-install the completion equipment, incorporating the concentric jet pump assembly.

The Company plans to announce the results of the well production with artificial lift as soon as production rates have stabilised.
